# What is the right pathway to be sustainable? Case of biofuels and bioproducts in Europe

---

## CHEMICAL ENGINEERING

*Processes and Sustainable Development*

Sandra Belboom & Angélique Léonard

15/5/2013 - Glasgow

# Contents

- 1. Introduction**
2. Production of biofuel
3. Production of HDPE
4. Results
5. Conclusions

Worldwide energy  
context

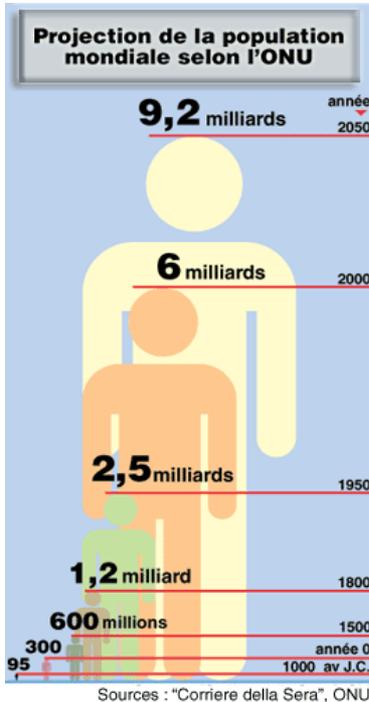

Bioethanol

Bioethanol uses

# 1. Introduction

## 1.1. Worldwide energy context

What are the next challenges?

Population increase

Climate change

Natural resources depletion

Worldwide energy  
context

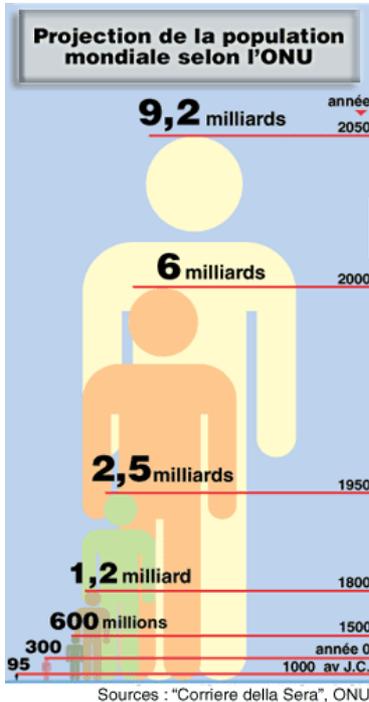

Bioethanol

Bioethanol uses

# 1. Introduction

## 1.1. Worldwide energy context

What are the next challenges?

Population increase

Climate change

Natural ressources depletion

Worldwide energy  
context

Bioethanol

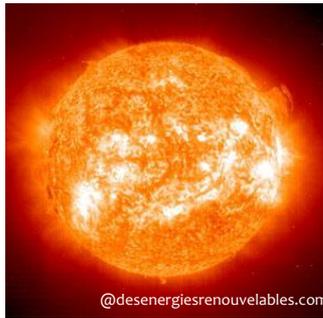

Bioethanol uses

# 1. Introduction

## 1.1. Worldwide energy context

What are the possible solutions?

For electricity production:

For transportation sector:

SUGAR CHAIN =  
BIOETHANOL

OIL CHAIN =  
BIODIESEL

Worldwide energy  
context

Bioethanol

Bioethanol uses

# 1. Introduction

Bioethanol uses

# 1. Introduction

## 1.2. Bioethanol

What crops are used?

In America

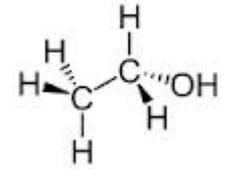

North and Central America

Brazil

Canada

In Europe

Worldwide energy context

Bioethanol

Bioethanol uses

# 1. Introduction

## 1.3 Bioethanol uses

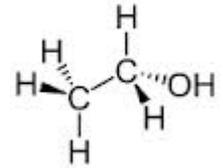

What are the available bioethanol uses?

Most common use:

- Biofuels

Other possibility:

- Feedstock for chemical industry
  - Production of bioplastics

Worldwide energy  
context

Bioethanol

Bioethanol uses

# Contents

1. Introduction

**2. Production of biofuel**

3. Production of HDPE

4. Results

5. Conclusions

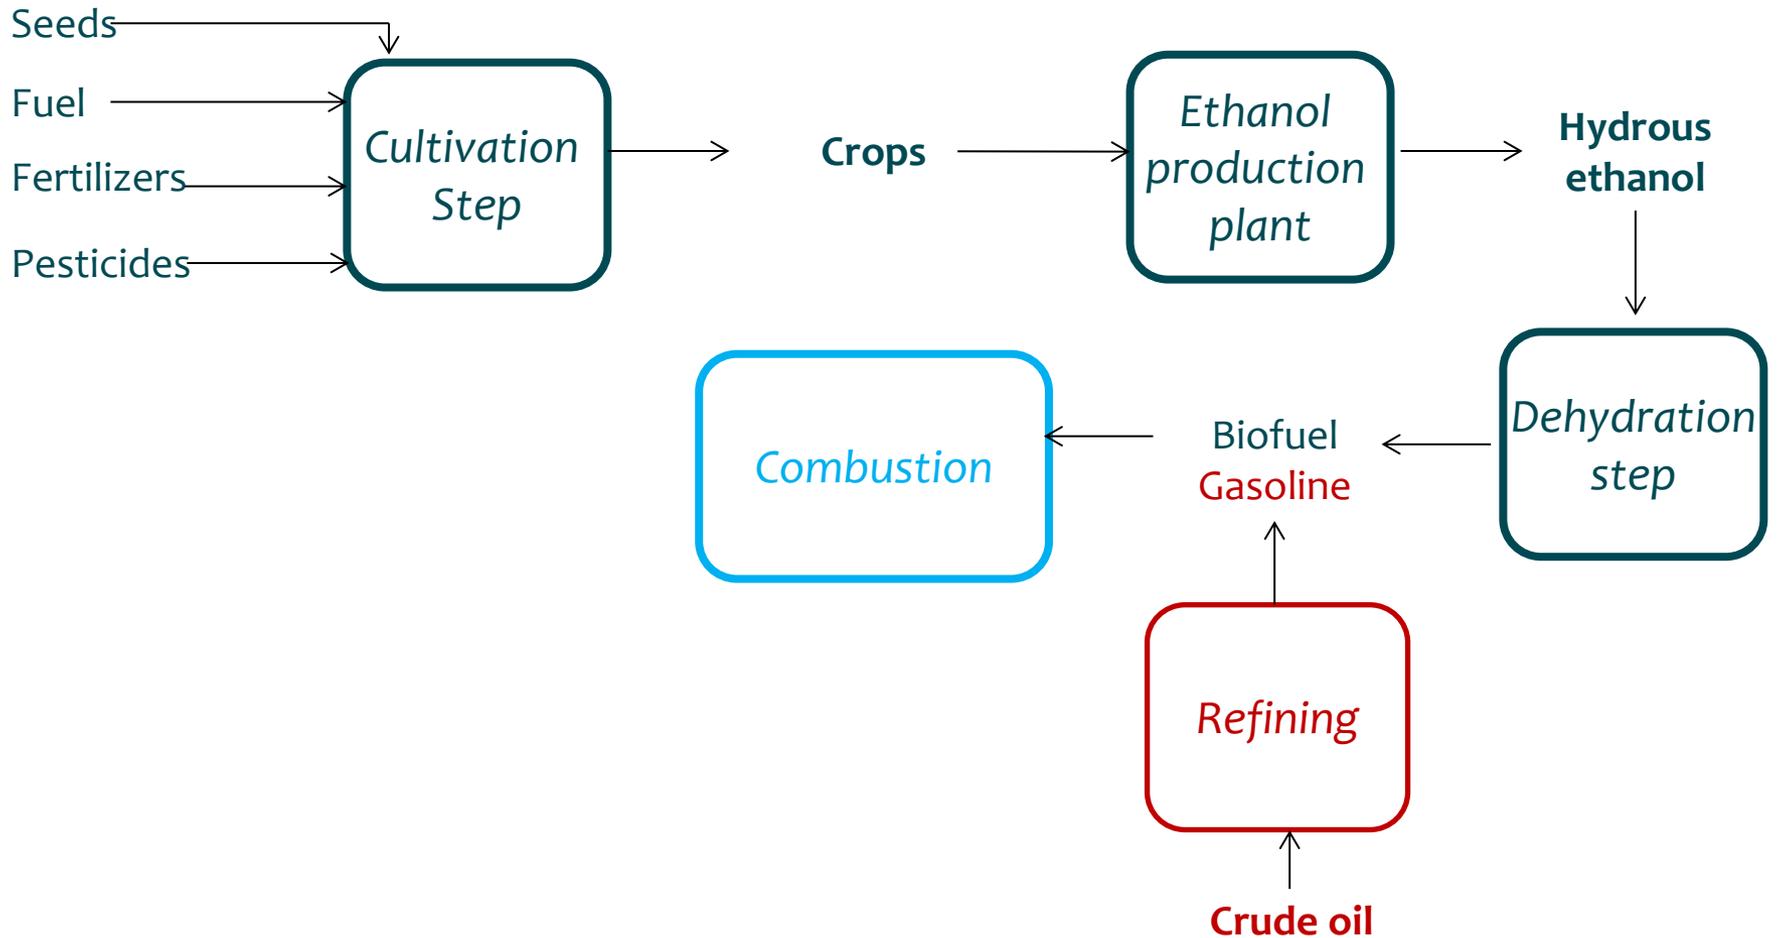

Boundaries of systems

From biomass to biofuel

From oil to gasoline

## 2. Production of biofuel

From oil to ethylene

# Contents

1. Introduction
2. Production of biofuel
3. Production of HDPE
- 4. Results**
5. Conclusions

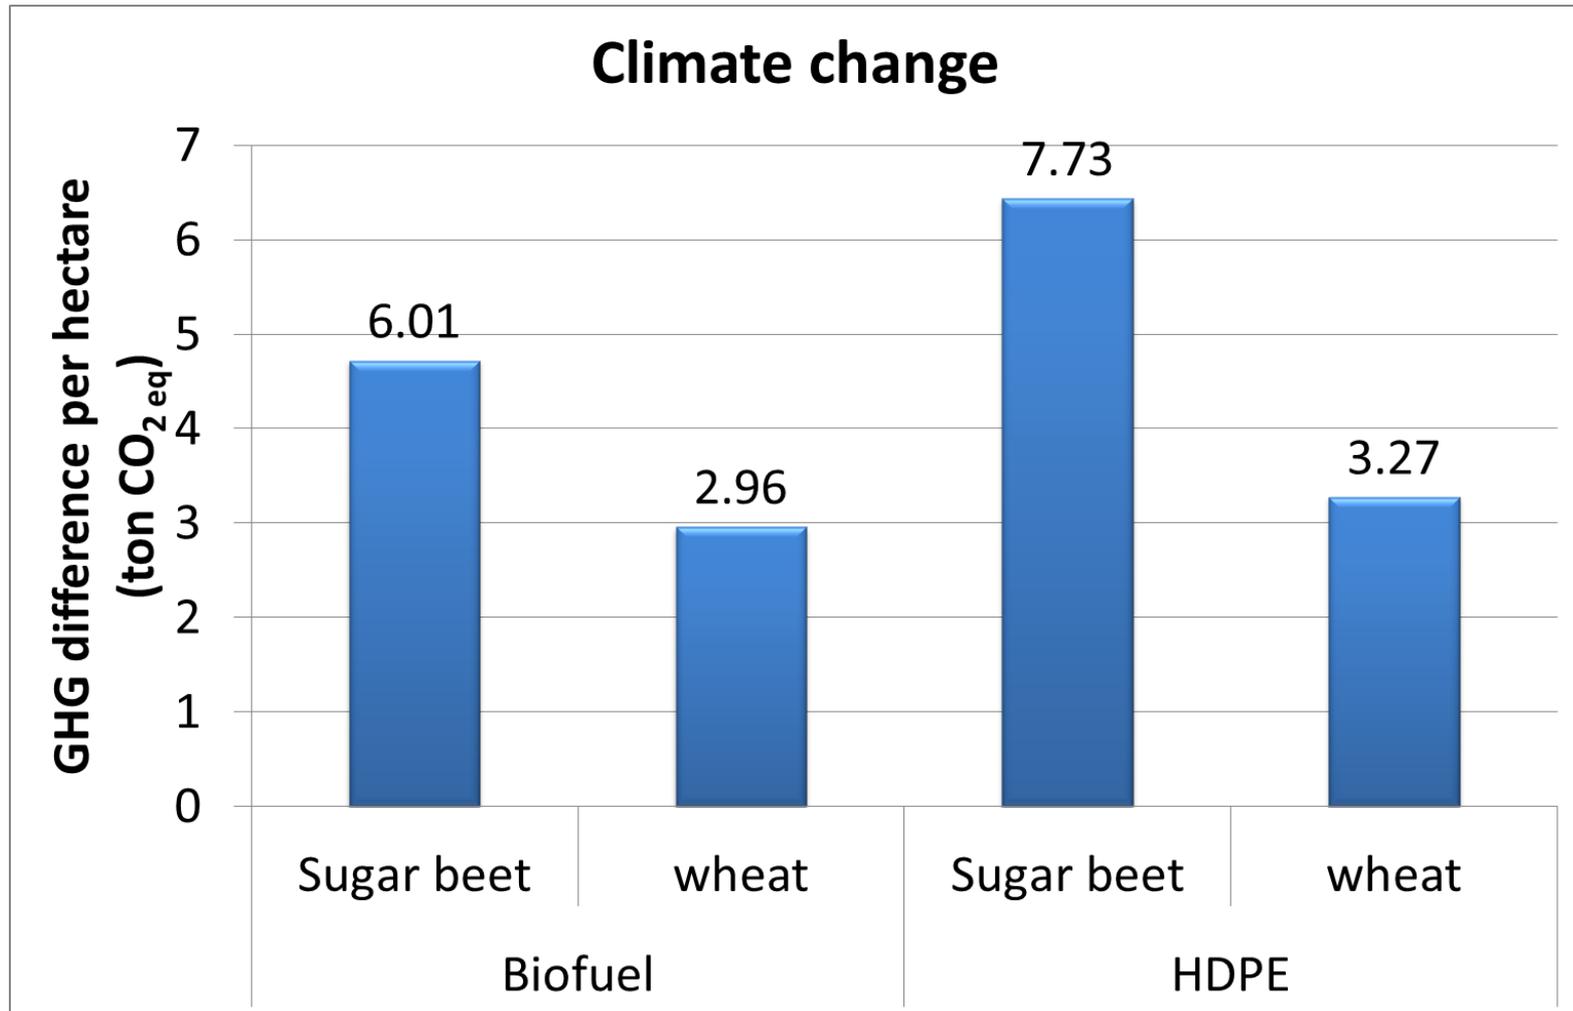

Climate change

Fossil fuel depletion

Single score

# 4. Results

## 4.1. Climate change

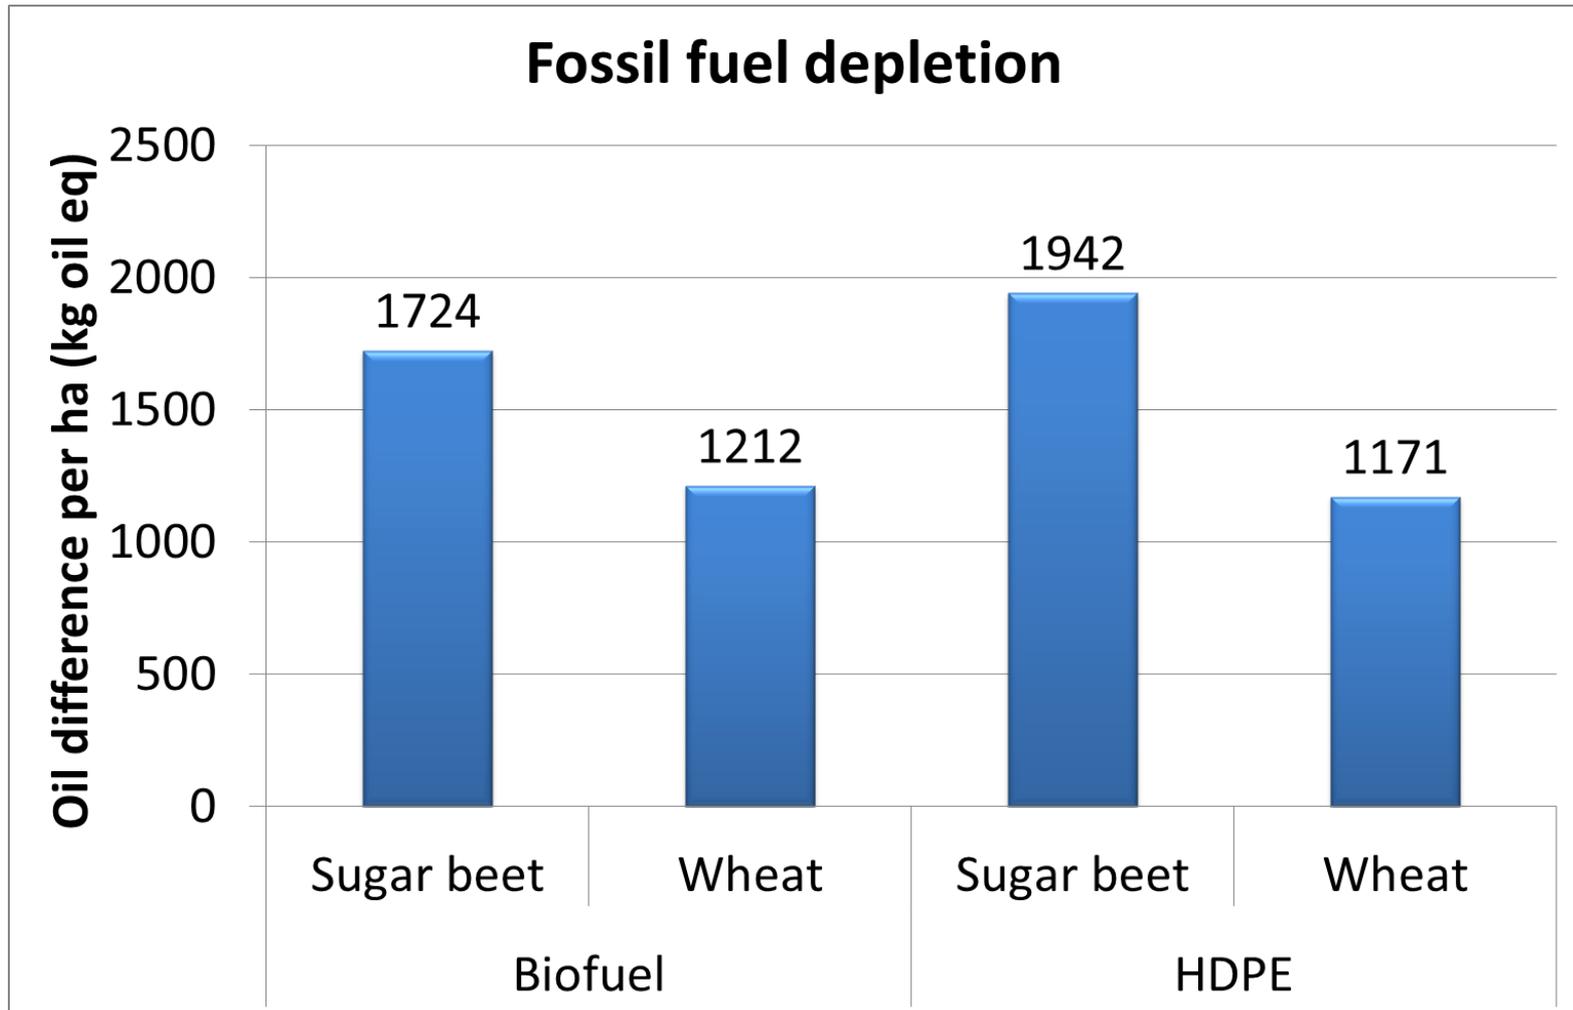

Climate change

Fossil fuel depletion

Single score

# 4. Results

## 4.2. Fossil fuel depletion

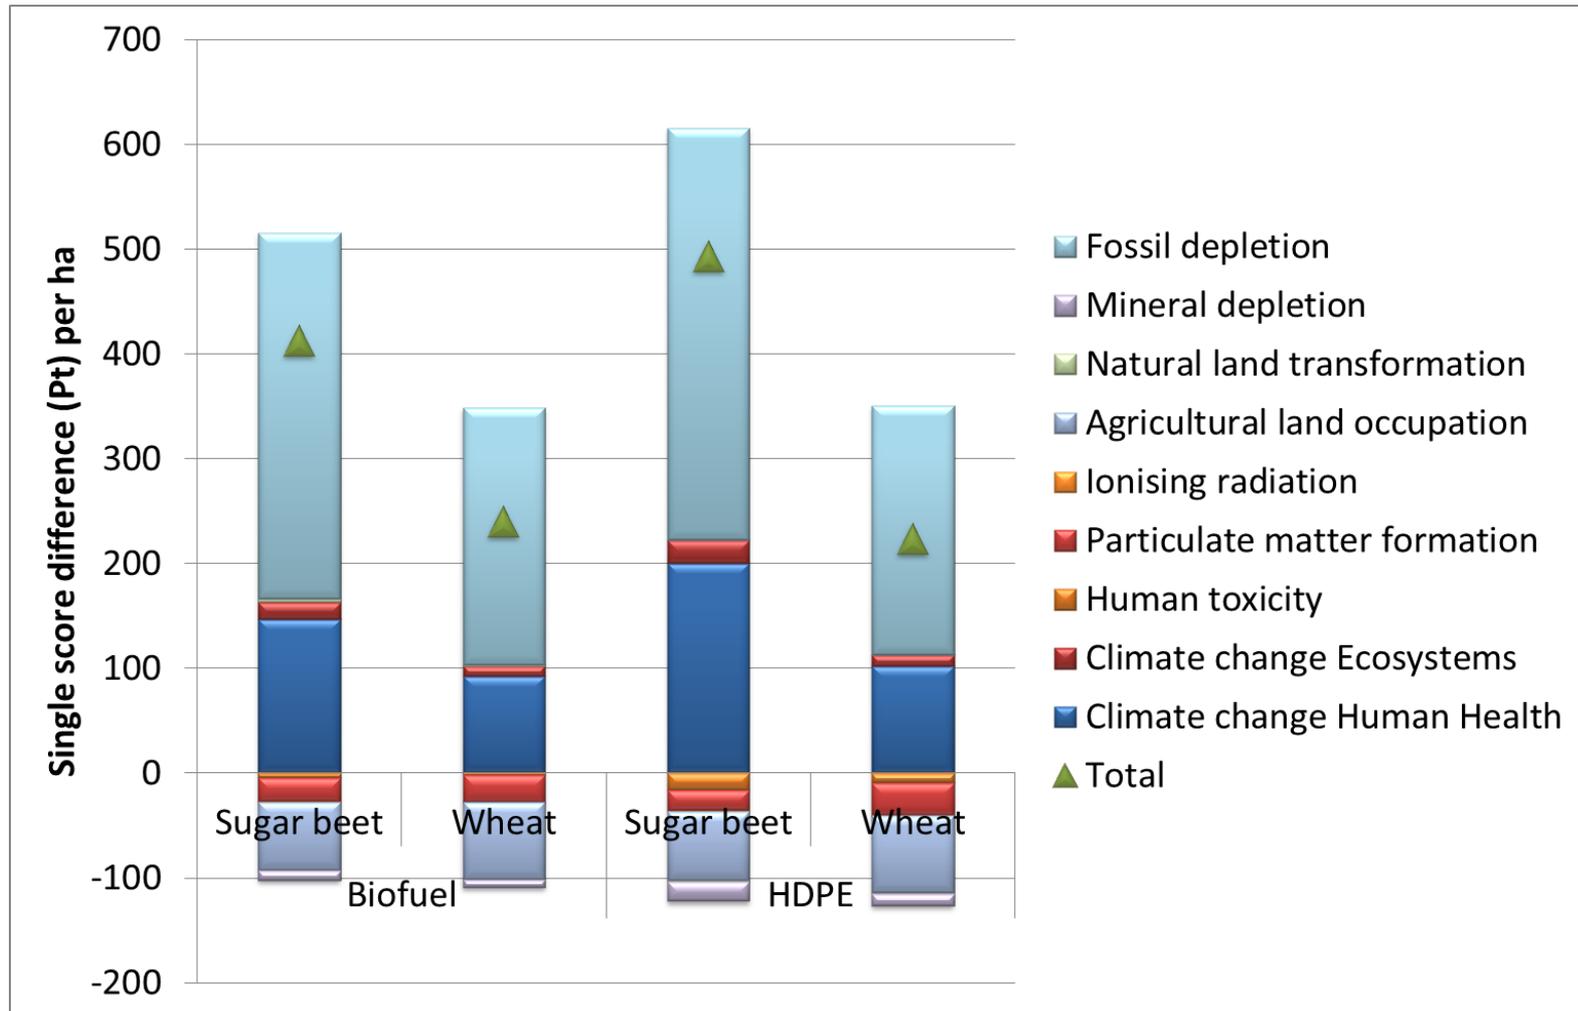

Climate change

Fossil fuel depletion

Single score

# 4. Results

## 4.3. Single score

Climate change

Fossil fuel depletion

Single score

# Contents

1. Introduction
2. Production of biofuel
3. Production of HDPE
4. Results
- 5. Conclusions**

# 5. Conclusions

## 5.1. Conclusions

- Importance of yield:
  - Sugar beet allows more bioethanol per hectare than wheat
  - Belgian yields are very high in Europe
- When comparing biofuel and bioplastic:
  - Best score is obtained by sugar beet
  - Bioplastic allows more GHG and fossil fuel consumption reduction

# 5. Conclusions

## 5.2. Perspectives

- Complete LCA with all other environmental impact:
  - Human toxicity
  - Water depletion
  - Etc.
- Inclusion of consequential approach:
  - Effects on crops, plastics and biofuels markets
- Definition of a hierarchy for the land occupation:
  - Food
  - Feed
  - Material
  - Fuel

---

# Thank you for your attention!
