

# The determinants of charitable giving in Belgium

4th EMES International Research Conference on Social Enterprises,  
Liège, Belgium

Amélie Mernier, Frédéric Dufays, Catherine Dal Fior  
Centre for Social Economy, HEC-ULg Management School

July 2, 2013

# Motivations for research

- Around 300 million euros a year in Belgium (only monetary donations)
  - Funding source for many organisations of the third-sector
  - In times of crisis
  - Very few studies for Belgium
- ➔ What are the determinants of charitable giving in Belgium?

# Outline

- Literature Review
- Database
- Model
- Results
- Implications and conclusion

# Literature review (1/2)

- **In Belgium:**

- No systematic research on charitable giving, some studies in Flanders
- Income, schooling, age – Not gender and dependent children

- **Theoretical arguments:**

- Maximization of the utility
- Theory of Planned Behaviour
- Psychological effects

# Literature review (2/2)

- **Empirical arguments:**
  - Likelihood to donate / Level of donation
  - Most used explanatory variables: income, marital status, gender, age, education level, tax schedule
  - Mixed results except: income, education, age
- **Econometric arguments:**
  - Tobit model
  - More complex model: two-steps Heckman, double Hurdle

# Database

- **From 2005 to 2010**
- **Fiscal data on donations and revenues**
  - For every Belgian (> 18 years old), Individual OR joint
  - To institutions with agreement, donations > 30€ (2010)
  - Aggregated at the *municipality-level* (587): gender, declaration type, age
- **Demographic data**
  - Population size, density, average revenue declared, Regions
- **Political data**
  - Political party of municipality' mayors (2006)

# Model

- $Y_1$ = Proportion of declarations with donation
- $Y_2$ = Average amount of donation
- OLS and fixed effects (heterogeneity bias)

$$Y_{di} = \alpha + \beta_1 \text{Gender}_i + \beta_2 \text{Declaration type}_i + \beta_3 \text{Age 40-49}_i + \beta_4 \text{Age 50-59}_i + \beta_5 \text{Age Older than 59}_i + \beta_6 \text{Average revenue by declaration}_i + \beta_7 \text{Municipality size}_i + \beta_8 \text{Population density}_i + \varepsilon$$

- Additional variables: region, political party, years

# Descriptive statistics (1/7)

- By region (type of declaration, age, gender)
- By year (evolution between 2005 and 2010)
- Map analysis
- Correlation analysis

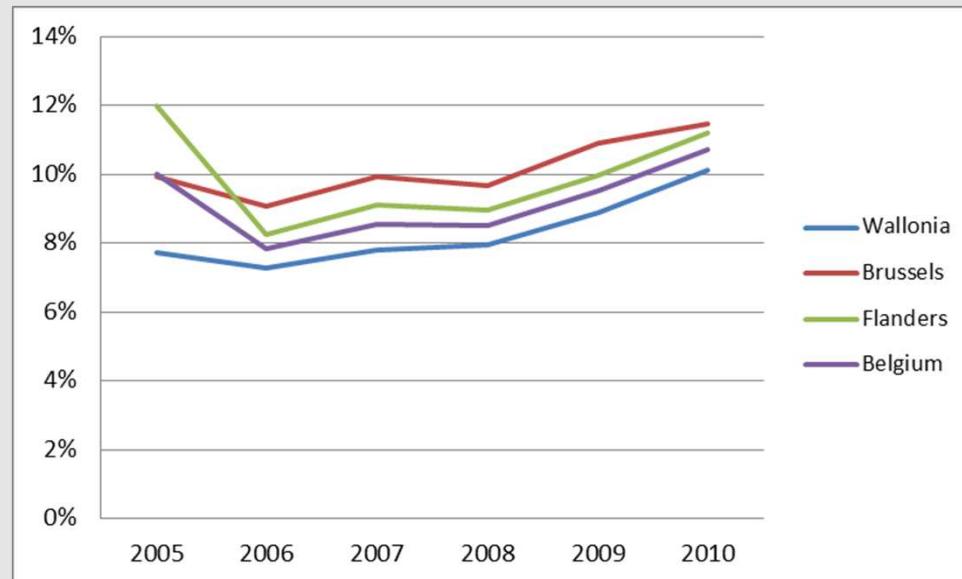

# Descriptive statistics (2/7)

Proportion of declarations with donation	Wallonia	Brussels	Flanders	Belgium
N (CSX Time)	262X6= 1522	19X6=114	306X6=1836	<b>587X6=3522</b>

# Discussion

	Y1- OLS	Y1- FE	Y2- OLS	Y2- FE
Female	Mixed	-	-	+
Joint declaration	Mixed	+	-	-
Age	+ (Elderly)	- (Elderly)	+ (Elderly)	Not significant
Population density	+	Not significant	Mixed	Not Significant
Average declared income (in 000s)	+	+	+	+
Municipality size (in 000s)	+	-	Not significant	Not significant
Wallonia	-	N.a.	+	N.a.
Brussels	+	N.a.	+	N.a.
Left-wing party	-	N.a.	-	N.a.
Center-party	-	N.a.	Not significant	N.a.
Right-wing party	-	N.a.	-	N.a.
Years	U-Shaped	U-Shaped	U- Shaped	U-Shaped

- Gender, Marital status, Age, Income, Region, Political party
- Economic crisis

# Conclusion – Future research

- Data at individual level → Two-step Heckman
- Longitudinal survey → motivations, non-deductible donations, volunteering
- Deductible amount = 40 € in 2011 → addressing endogeneity problem

# Thanks for your attention
