Received 2 April 2014; accepted after revision 3 April 2014; online publish-ahead-of-print 22 May 2014

An updated version of the European Association of Cardiovascular Imaging (EACVI) Core Syllabus for the European Cardiovascular Magnetic Resonance (CMR) Certification Exam is now available online. The syllabus lists key elements of knowledge in CMR. It represents a framework for the development of training curricula and provides expected knowledge-based learning outcomes to the CMR trainees, in particular those intending to demonstrate CMR knowledge in the European CMR exam, a core requirement in the CMR certification process.

Keywords Education • Cardiovascular magnetic resonance • Exam • Syllabus • Certification

Introduction

Cardiovascular magnetic resonance (CMR) has become an established imaging modality, which often provides unique information on a wide range of cardiovascular diseases. The CMR Section of the European Association of Cardiovascular Imaging (EACVI), the former European Society of Cardiology (ESC) Working Group on CMR, offers a process for certification of individuals in CMR. The aim of this process is to set a European standard for competency in the practice of CMR for the benefit of patients undergoing CMR studies. Competency requires knowledge, skills, and an appropriate professional attitude. CMR knowledge is tested in the European CMR exam organized by the EACVI Section CMR and is coordinated and supervised by the European CMR Exam Board. The exam tests CMR knowledge, which is only one aspect of the competency requirements for CMR certification; skills and professional attitude are established using other means, such as CMR reporting logbooks and reference letters. To provide exam candidates with learning objectives and an expected knowledge base, a detailed CMR syllabus had been developed by the European CMR Exam Board and made available online in 2011. This CMR syllabus has now been updated and re-structured to align in form and scope with the
Echocardiography Core Syllabus of the EACVI (http://www.escardio.org/communities/EACVI/education/Pages/core-syllabus-echo.aspx). This new EACVI Core Syllabus for European CMR Certification Exam is now available online (http://www.escardio.org/communities/EACVI/education/Pages/core-syllabus-cmr.aspx).

Scope of the CMR Certification Exam syllabus

The purpose of the CMR Certification Exam syllabus in conjunction with the Echocardiography Core Syllabus and others that may follow is to encourage homogeneous cardiovascular imaging education and structured certification in Europe. It provides a core knowledge summary for cardiology trainees, cardiologists, and professionals with an interest in CMR. The syllabus can serve as a guide for developing educational material and educational course content. Trainees may use the CMR syllabus to guide their preparation for knowledge-based assessments (in particular the European CMR Exam). Levels 2 and 3 CMR-certified practitioners might identify topics in which they would benefit from Continuous Medical Education (CME). Harmonized imaging education and assessment facilitate the delivery of standardized high-quality cardiac imaging, which in turn leads to improved diagnosis and management of cardiovascular disease across Europe.

Use of the core syllabus within the EACVI activities

The role of the EACVI is to provide guidance, to facilitate harmonization of cardiac imaging practice standards, to define knowledge requirements, and to promote education. The EACVI is a world leader in education, providing high-quality educational opportunities through congresses, teaching courses, journals, website, books, recommendations and position papers, slide-sets, and other tangible educational materials. The EACVI CMR Certification Exam Syllabus will be used to standardize the content of these educational opportunities and of the educational activities organized by the EACVI in collaboration with National Societies and National Working Groups. The EACVI values the contribution of National Societies and Working Groups in educational activities. The new EACVI CMR Certification Exam Syllabus will be used to update the ESC Core Syllabus and Core Curriculum in clinical cardiology. Furthermore, the document will represent the foundation of collaboration between the EACVI Education Committee, the EACVI Board, and the ESC Education Committee in awarding adequate CME credits to educational activities run throughout Europe.

Perspectives

The syllabus will become the reference outline for all teaching materials and courses in CMR throughout Europe. It will represent the foundation of the new European electronic education platform (ESCel). The EACVI will ensure that the syllabus will be kept updated, ensuring advances in the field of CMR are incorporated. The CMR Certification Exam Syllabus is aligned with the Echocardiography Core Syllabus of the EACVI. It is expected that the other cardiac imaging modalities will follow suit in due course. The aim is to create a complete Cardiovascular Imaging Core Syllabus.
