CONTENTS

VOLUME 26 PART C

EXTRACELLULAR AND SUPPORTING STRUCTURES

(continued)

Chapter IX. Chitinous Structures

by CHARLES JEUNIAUX

1. Introduction: the concept of chitinous structures	595
2. Chemical composition and molecular structure of chitin	596
a. Physical properties	596
b. Nature of the amino-sugar residues in chitin	597
c. Macromolecular structure	597
3. Distribution and chemical composition of chitinous structures	602
a. Detection of chitin	602
b. Occurrence and chemical features of chitinous structures	603
(i) Flexible chitinous structures, 608 - (ii) Sclerotized chitinous structures, 609 - (iii) Calcified chitinous structures, 610 - (iv) Non-calcified mineralized chitinous structures, 611 -	
4. The chitin-protein complexes	611
5. Ultrastructure	614
a. Flexible chitinous structures	614
b. Sclerotized chitinous structures	620
c. Calcified chitinous structures	620
d. Concluding comments	623
6. Synthesis and degradation of chitinous structures	623
a. Formation of chitinous structures	623
b. Chitin biosynthesis	624
c. Biological degradation of cuticular components during the life cycle of arthropods	625
d. Degradation of chitinous structures in digestive processes	626
e. Degradation of chitinous structures in soils, waters and sediments	626
7. Morphological radiation of chitinous structures	626
References	629

Chapter X. Resilin

by S. O. ANDERSEN

1. General description and definition	633
2. Occurrence of resilin	634

3. Physical and chemical properties of resilin	639
4. Amino acid composition of resilin	642
5. Cross-links in resilin	644
6. Deposition of resilin	647
7. Resilin compared to other cuticular proteins in locusts	651
Acknowledgement	655
References	656

Chapter XI. Elastin

by CARL FRANZBLAU

1. Introduction	659
2. Isolation of elastin	660
3. Mechanical properties of elastin	662
4. Morphology and distribution	665
5. Amino acid composition	667
6. Quantitative estimation	667
7. Solubilization of elastin	669
a. Enzymatic	669
b. Chemical	670
8. Nature of the crosslinkages	671
a. Desmosine and isodesmosine	671
b. Lysinonorleucine	673
c. Biosynthesis of the crosslinkages	675
d. Mechanism of crosslink formation	679
e. Intermediates in crosslink formation	681
9. Experimental disorders of connective tissues as aids to investigation of the crosslinks of elastin	689
a. Lathyrism	689
b. Copper deficiency	691
(i) Effect on crosslinking of elastin, 691 – (ii) Isolation of soluble elastin precursor, 692 – (iii) Conversion of lysyl residues in soluble elastin to insoluble elastin fiber, 693 – (iv) Penicillamine, 695 –	
10. Relationship of crosslinks in collagen to crosslinks in elastin	697
11. Biogenesis	699
12. Elastin models	706
13. Interaction of elastin with other substances	708
Acknowledgements	708
References	709

Chapter XII. The Tubes of Polychaete Annelids

by RENÉ DEFRETIN

Summary	713
1. Introduction	713
2. Tube-forming organs	718

a. Spionidae	718
b. Chaetopteridae	718
c. Sabellaridae	719
d. Sabellidae	719
e. Amphictenidae	721
f. Serpulidae	721
g. Nereidae	722
3. Glands responsible for tube secretion	722
a. Spionidae	722
b. Chaetopteridae	723
c. Sabellaridae	723
d. Amphictenidae	724
e. Terebellidae	724
f. Sabellidae	725
g. Serpulidae	725
h. Nereidae	727
i. Ennicidae	728
Summary	728
4. Biochemical investigation of the tubes	729
I. Methods	729
a. Protein part	729
(i) Separation of the amino acids, 729 – (ii) Identification of the amino acids, 730 –	
b. Carbohydrate part	730
(i) Carbohydrates, 730 – (ii) Glycosamines, 730 – (iii) Uronic acids, 730 – (iv) Sialic acids, 730 – (v) Separation of the carbohydrates, 730 – (vi) Identification of the monosaccharides by paper chromatography, 731 –	
II. Results	731
a. Sabellaridae	731
b. Amphictenidae	732
c. Terebellidae	735
d. Sabellidae	735
(i) Dialysable and non-dialysable components, 736 – (ii) Examination of the carbohydrate fraction, 738 – (iii) Examination of the protein fraction, 739 –	
e. Discussion on the tubes of the Sabellidae	742
f. Eunicidae	743
5. Conclusions	744
References	746

Chapter XIII. Constituents of Brachiopod Shells

by MARGARET JOPE

1. Introduction	749
a. The nature of brachiopods	749
b. Classification	750
2. Shell structure	750
a. General structure	750
b. Microstructures	752
(i) The periostracum, 752 – (ii) The calcareous shell, 754 –	

3. Shell constituents	761
a. Inorganic	761
b. Organic	762
(i) Proteins, 762 – (ii) Polysaccharides, 773 – (iii) Lipids, 775 –	
4. Shell formation	776
a. Growth processes	776
(i) The periostracum, 777 – (ii) The calcareous primary layer, 777 – (iii) The calcareous secondary layer, 778 –	
b. Calcification	778
5. Concluding remarks	781
References	783

Chapter XIV. Dental Enamel

by JOHN E. EASTOE

1. Introduction	785
2. Characteristics and constituents of enamel	788
a. Some features of enamel structure	788
(i) Enamel as a two-phase system, 789 – (ii) Histological structure, 789 –	
b. Overall changes during mineralization and maturation	791
c. Chemical balance sheet for enamel	795
(i) Balance sheet for immature enamel, 796 – (ii) Balance sheet for mature enamel, 796 –	
3. The inorganic phase	798
a. Nature of the main constituent	798
(i) Chemical structure, 798 – (ii) Physical characteristics, 800 –	
(iii) Mechanism of crystal growth, 803 –	
b. Minor inorganic constituents	804
4. The organic phase	805
a. The protein content of young enamel	805
b. The protein content of mature enamel	808
(i) Early investigations based on sedimentation of enamel, 808 – (ii) Proteinaceous material in middle and outer enamel, 809 – (iii) Acid-insoluble protein in inner human enamel, 812 – (iv) Post-eruptive integument of enamel, 813 –	
c. Heterogeneity of proteins in young enamel	814
(i) Solubility differences, 814, — (ii) Electrophoretic separations, 814 – (iii) Column separations, 815 – (iv) The current state of knowledge, 818 –	
d. The nature of enamel protein	821
(i) Amorphous character of the organic phase, 821 – (ii) X-Ray diffraction, 822 – (iii) Mutability, 824 – (iv) The spatial pattern of maturation, 824 – (v) Mechanism of protein removal, 826 – (vi) Relation between the organic and inorganic phases, 829 –
