

An Affective Account of Distance Estimation Biases

Magda L. Dumitru¹ & Achille Pasqualotto²

1 University of Liège, 2 Sabanci University

Dumitru and Joergensen (2016) employed a task designed to probe social attitudes to covertly investigate the magnitude estimation of digit-word expressions (e.g., '8 ants'). Here we employed a task designed to elicit affective states to gain insights into distance underestimation and boundary extension biases.
