

Diva workshop 2014

Installation and tests

Alexander Barth, Aida Alvera-Azcárate, Mohamed Ouberdous,
ctroupin Troupin, Sylvain Watelet & Jean-Marie Beckers

Acknowledgements: SeaDataNet, EMODnet Chemistry,
EMODnet Biology, STARESO

Download and extract the code

Create directory and download Diva archive

```
[ctroupin@gher13 ~]$ mkdir DIVA
[ctroupin@gher13 ~]$ cd DIVA/
[ctroupin@gher13 DIVA]$ wget http://modb.oce.ulg.ac.be/
mediawiki/upload/DIVA/releases/diva-4.6.7.tar.gz
```

Extract the archive and go in the main directory:

```
[ctroupin@gher13 DIVA]$ tar -xvf diva-4.6.7.tar.gz
[ctroupin@gher13 DIVA]$ cd diva-4.6.7/
```

If you already have a running older version, retrieve your `divacompile_options` and put it in place of the default in `DIVA3D/src/Fortran/`

Compilation

Go to source directory

```
ctroupin@gher13 ~/DIVA/diva-4.6.7 $ cd DIVA3D/src/  
Fortran/
```

Run divacompileall 🍳

```
ctroupin@gher13 ~/DIVA/diva-4.6.7/DIVA3D/src/Fortran $  
./divacompileall
```

You should get:

```
You have compiled 107 programs  
out of 107  
Writing log file...  
--> written in compilation.log  
...
```

Otherwise: edit `divacompile_options`

Alternative installation: virtual box

- Image `DIVA_Clone.tgz` on USB stick (Sylvain)
- Installation description <http://modb.oce.ulg.ac.be/mediawiki/upload/DIVA/notes/virtualbox.pdf>
- 1 Installation of virtualbox (4.3.12 or later)
- 2 Extract virtual machine `DIVA_Clone/vdi` (time consuming unzip)
- 3 Configuration of VirtualBox (New, Name: DIVA for type Linux Ubuntu 32, select 2500Mb RAM, search existing hard drive to locate `DIVA_CLONE.vdi` and create virtual machine)
- 4 Ready to run tests as `divauser` with `pw divauser` in a terminal of the DIVA virtual machine

Tests: 2D

Go to directory `divastripped` (main directory for 2D runs)

```
ctroupin@gher13 ~/DIVA/diva-4.6.7/DIVA3D/src/Fortran $  
cd ../../divastripped/
```

Run `divatest0` ☕

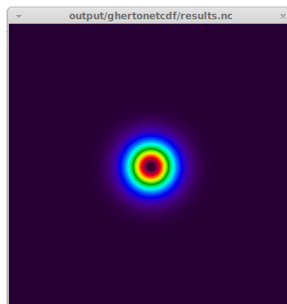

```
ctroupin@gher13 ~/DIVA/diva-4.6.7/DIVA3D/divastripped $  
./divatest0
```

You should get:

```
Check the results in  
./ouput/ghertonetcdf/results.nc (netcdf)
```

```
Field value at origin = 0.49961258873206416
```

With `ncview`:

Tests: 2D

Run `divatest`

(test for pipes) ☹️

```
ctroupin@gher13 ~/DIVA/diva-4.6.7/DIVA3D/divastripped $  
./divatest
```

If you get:

```
!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!  
Pipe does not work  
!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!
```

then follow instructions on screen

Tests: 2D

Run `divabigtest`

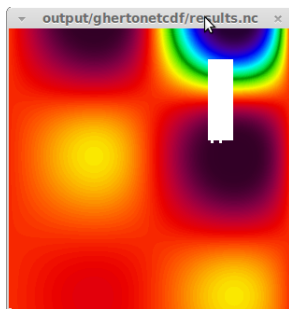

(test for large data files) ☕☕☕

```
ctroupin@gher13 ~/DIVA/diva-4.6.7/DIVA3D/divastripped $  
./divabigtest 100000
```

You should get:

```
...  
Check the results in  
./ouput/ghertonetcdf/results.nc (netcdf)  
Time for mesh creation: 0.830351 s  
Time for calculation: 87.1226 s  
Total time for analysis: 87.953 s
```

otherwise: decrease number of data

Tests: 4D

Go to directory `Climatology` (main directory for 4D runs)

```
ctroupin@gher13 ~/DIVA/diva-4.6.7/DIVA3D/divastripped $  
cd ../../JRA4/Climatology/
```

Copy the input files from the `Example4D`

```
ctroupin@gher13 ~/Software/diva-4.6.7/JRA4/Climatology $  
cp -r ../../Example4D/* .
```

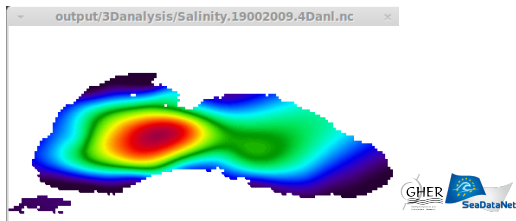

Run `divadoall` ☕☕

```
ctroupin@gher13 ~/Software/diva-4.6.7/JRA4/Climatology $  
./divadoall > runtest.log
```

You should get:

```
...  
check-list of errors :  
no error, you are lucky  
divadoall: =====  
divadoall: Finished Salinity  
divadoall: =====
```

and results in `output/3Danalysis/`

Alternative installation in a virtual box

Some optimisations can be used as explained in

<http://www.howtogeek.com/124796/>

[the-htg-guide-to-speeding-up-your-virtual-machines/](#)

- You might need to activate hardware virtualisation in your BIOS and then get access to multiprocessors
- 3D video acceleration activation can also increase performance

Then you need to find a way to share files with your host machine: done for you already via a shared folder called

`Divaexchange_guest` which is mounted automatically. Before launching the virtual machine, create a shared folder in your host machine, called `Divaexchange_host` in your home directory.
